

WHAT IS CLAIMED IS:

1. A computer implemented system for negotiation and tracking of sale of goods, comprising:  
5 a computer system having a processor and memory, the computer system executing a software application that provides a negotiation engine;  
10 the negotiation engine operating to store data representing a current state of a negotiation between a seller and a buyer;  
15 the negotiation engine storing the data within a framework for representing aspects of the negotiation between the seller and a buyer, the framework including:  
a request object, a promise object and an acceptance object that can store a current description of a contract;  
20 a set of one or more delivery deals determined by the contract, each delivery deal including a delivery request object, a delivery promise object, and a delivery acceptance object that can store associated item deals and time periods for delivery of item deals; and  
25 the item deals, each item deal including an item request object, an item promise object and an item acceptance object that can store individual sales-order line-items;  
such that the negotiation engine allows a user to monitor the current state of the negotiation over a range of prices, a range of dates, ranges of quantities of a

*Sub A* set of goods, and a range of configurations of the goods  
in the set.

2. The computer implemented system of Claim 1,  
5 wherein the negotiation engine stores data representing  
the negotiation only at its current state.

3. The computer implemented system of Claim 1,  
10 wherein the negotiation engine concurrently stores data  
representing the negotiation at request, promise and  
acceptance states.

4. The computer implemented system of Claim 1,  
15 wherein the request object has a plurality of fields  
including delivery requests, delivery policy, accept by,  
date issued, date accepted, date queued, and changeable.

5. The computer implemented system of Claim 1,  
20 wherein the promise object has a plurality of fields  
including delivery promises, delivery policy, accept by,  
date offered, and changeable.

6. The computer implemented system of Claim 1,  
25 wherein the acceptance object includes a plurality of  
fields including delivery acceptances and accepted.

*SZ*

7. The computer implemented system of Claim 1, wherein the delivery request object has a plurality of fields including item requests, due, max price, rate start, promising policy, fulfillment policy and rank.

5

8. The computer implemented system of Claim 1, wherein the delivery promise object has a plurality of fields including item promises, due, delivery price, rate start and fulfillment policy.

10

9. The computer implemented system of Claim 1, wherein the delivery acceptance object includes a plurality of fields including item acceptances, due, rate start and fulfillment policy.

15

10. The computer implemented system of Claim 1, wherein the item request object has a plurality of fields including configuration, quantity, max price and delivery plan.

20

11. The computer implemented system of Claim 1, wherein the item promise object has a plurality of fields including configuration, quantity, and price.

25

12. The computer implemented system of Claim 1, wherein the item acceptance object includes a plurality of fields including configuration and quantity.

SS

13. The computer implemented system of Claim 1,  
wherein the negotiation engine further operates to  
identify problem conditions responsive to fields of the  
request object, promise object and acceptance object  
reaching certain thresholds in relation to one other.

14. The computer implemented system of Claim 13,  
wherein the problem conditions pinpoint mistakes in the  
negotiation.

15. The computer implemented system of Claim 13,  
wherein the negotiation engine further operates to  
provide resolution methods for each problem condition.

16. The computer implemented system of Claim 13,  
wherein the problem conditions include a set of problems  
identified responsive to a change in data after an  
acceptance in an attempt to reopen the negotiation.

20  
25. The computer implemented system of Claim 1,  
wherein the negotiation engine further operates to export  
the data representing the current state of the  
negotiation to a planner-scheduler for purposes of  
prioritizing planning activities.

18. The computer implemented system of Claim 17,  
wherein the exported data is used to report when the  
buyer and the seller made certain proposals and  
commitments.

5

19. The computer implemented system of Claim 1,  
~~wherein the exported data is used for effective~~  
calculation of available to promise product.

*SAC*

20. A computer implemented process providing a framework for negotiation and tracking of sale of goods, comprising:

5 establishing a relationship between a plurality of negotiation states, the states including a no request state, a requested state, a promised state, a countered state, a queued state, and an accepted state;

10 identifying an action by a negotiating party as being an action selected from the group consisting of a request action, a promise action, a queue request action, a delete action and an acceptance action;

15 moving between the negotiation states responsive to the action identified; and

storing data representing the current state of the negotiation.
